 - Last movies added
 - First movies added
 - High rating
 - Low rating
- First focus inside the main page is now over the first movie covers.
- Discs inside the computer drives are now showed in the main page.
- Movie discs have more info inside the details panel (server name, path and archive).

Collector

- New backup feature added. Now it's possible to select the option "DVD to Linksys" which converts a DVD into an mpeg file with video bitrate lowered from 9800 to 5000.

Collection Manager

- New skin.
- Movie discs can now be played inside this application.
- New backup feature added. Now it's possible to select the option "DVD to Linksys" which converts a DVD into a mpeg file with video bitrate lowered from 9800 to 5000.
- Network shares management. When saving or updating an archive, if a network share already exists for that archive, it's automatically associated to it.

Control Center

- New skin/interface.

QuiiQ MOVIES 1.4

Projector

- All web service communications were converted to IPC and TCP messages. This feature was developed to considerably improve the communication and performance between applications.

Collector

- All web service communications were converted to IPC and TCP messages. This feature was developed to considerably improve the communication and performance between applications.

- New interface implemented. The interface now functions and resembles to a windows wizard making the interaction more user friendly.

Collection Manager

- All web service communications were converted to IPC and TCP messages. This feature was developed to considerably improve the communication and performance between applications.
- The application is now expandable, allowing window maximization for a more complete overview of the content.

QuiiQ MOVIES 1.3

Projector

- When seen in an Extender, only the media files selected by the user in Control Center will be displayed.
- (**Bug fix**) If watching Live TV, in case the full screen box is selected the channel doesn't change.
- Shortcuts were implemented in the Main Page. If the user presses any letter (numbers in the remote) the interface will jump automatically to the first movie in the list that begins with that letter (In the Movies, Actors and Directors area).
- HD Playback is now supported.

Collector

- (**Bug fix**) Now it's possible to backup movie DVD's that have special characters in their title ("'", "?",...)

Collection Manager

- Monitored folder implemented. For every movie, it's possible to select a specific folder that will be monitored and all media files or DVD's inserted will be automatically added to the database.

Control Center

- New skin.
- It's possible to manually adjust an Extender display to the monitor screen.
- Manages the file extensions that will be showed in the Projector details panel when using an Extender
- "My Movies" import feature, now as a deep search that adds all movies inside a folder automatically.
- It's possible to choose between full screen, sandbox or "no display" for the Projectors background (for the movies playback).
- It's possible to see all players that are associated to current Media Center installation.
- The user can select the location of the tool "Daemon tools" that will allow Projector to mount image files (ISO, NRG,...) to be played in Media Center.
- QuiiQ MOVIES auto play options in Media Center (when a DVD is inserted), are now configurable.
